

CASE STUDY 005

[Python]

Students' Academic Performance

Here are some clues in case you are stuck with the case study:

1. There are mistakes in 4 country names. You will need to fix them.
2. Rename Classes in "Low-Level", "Medium-Level, "High-Level" accordingly, fix column names, and StageID column values.
3. Use seaborn package for visualization.
4. Use plt.subplots for creating visualization dashboard.
